

ETERNAL® odmašťovač DIRECT

Serial number 1901

Degreasing agent for direct usage

Features:

ETERNAL odmašťovač DIRECT is a product for professional degreasing of metals and old coatings, for cleaning of mid-polluted surfaces and removing of oil and other grease impurities. It is specified by higher effectiveness and broader area of usage on various kinds of impurities than other degreasing agents. It contains complex of modern active agents, it is thrifter to surfaces and health of people. It does not contain any hydroxides.

Usage:

ETERNAL odmašťovač DIRECT is made for cleaning and degreasing of metal surfaces, floors, old coatings and other surfaces before coating with water soluble or dissolvent coatings. It is suitable for cleaning of engines, degreasing in repairing, galvanizing, painting shops, industrial plants, industrial glass cleaning, cleaning of grills, fireplaces, chains and bicycle transmissions, kitchen hoods, etc. It is suitable for direct application. Degreasing can be done manually or by spraying. Part of the package is also sprayer with special grill, which makes degreasing of vertical surfaces much easier.

Technical data:

Specific weight	approx. 1,0 g/cm ³
pH (23 °C)	approx. 11,6

Packaging:

0,75 kg plastic bottle with sprayer

Storage:

In original well closed packaging from 5 °C to 25 °C. It must not freeze! Do not leave the product on direct sunlight.

Application:

ETERNAL odmašťovač DIRECT is applied manually or by spraying. The product is made for direct application. **It must not be diluted!** Time until the product is fully effective is affected by degree of pollution/grease pollution of surface. It varies between 30 seconds to 2 minutes. After this time, the surface must be mechanically cleaned and swiped, followed by rinsing with water. In case the surface is strongly polluted, it is recommended to repeat the whole process (application-swiping-rinsing). Coatings can be applied to the surface after it is dried.

Waste disposal:

Described on Safety data sheet of the product.
